Correction: *Development of a systemic lupus erythematosus cardiovascular risk equation*

The article has been corrected since it was published online. In the Results section (page 4), the third paragraph (column 1) should read as:

The HRs in table 4 can be used to calculate the 10-year risk for a patient with any risk factor profile using the formula:

\[
\text{Risk} = 1 - 0.975^{HR}
\]

where HR is the hazard ratio for that patient relative to a non-smoking female aged 50 years with systolic blood pressure=120 mm Hg, total serum cholesterol exceeding 150 mg/dL, and no diabetes and no SLE risk factors.
