Correction: Development of a systemic lupus erythematosus cardiovascular risk equation

The article has been corrected since it was published online. In the Results section (page 4), the third paragraph (column 1) should read as

The HRs in table 4 can be used to calculate the 10-year risk for a patient with any risk factor profile using the formula:

$$\text{Risk} = 1 - 0.975^{\text{HR}}$$

where HR is the hazard ratio for that patient relative to a non-smoking female aged 50 years with systolic blood pressure=120 mm Hg, total serum cholesterol exceeding 150 mg/dL, and no diabetes and no SLE risk factors
