LFA-REAL™ (RAPID EVALUATION OF ACTIVITY IN LUPUS)
[CLINICIAN REPORT]

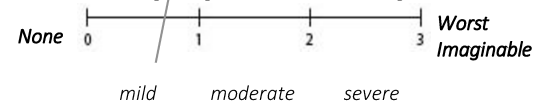

DIRECTIONS: Thinking of the past month, put one line () anywhere through each scale below to assess the severity of lupus activity in each symptom/organ for the patient. Score only lupus disease activity (not chronic damage). If there is no activity in a particular symptom/organ, mark 0 (none) for that organ/system. Rate each active symptom/organ separately. Use “other” scales for symptoms/organs not listed here. The sum of organ scores provides the global disease activity. When performing monthly assessments, look back at your last form and place your mark considering the patient’s progress during the past month.

Examples:

A moderate arthritis, not quite severe might be rated like this:

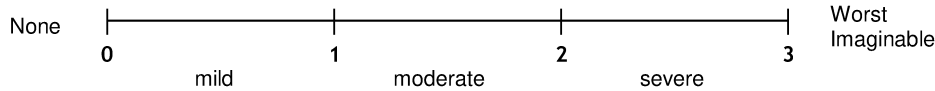

A mild arthritis, getting better this month might look like this:

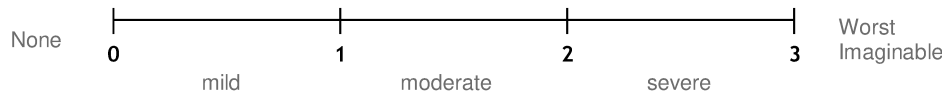

How severe was each organ/system disease activity over the past month?

MUCOCUTANEOUS - GLOBAL

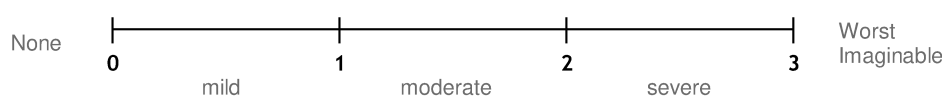

Mucocutaneous components:

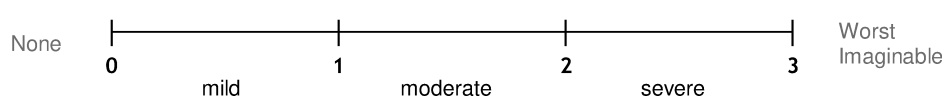

a. RASH

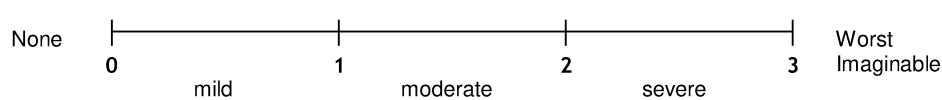

b. ALOPECIA

c. MUCOSAL ULCERS

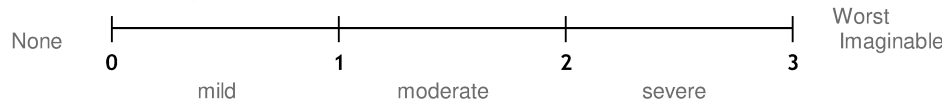

MUSCULOSKELETAL – GLOBAL

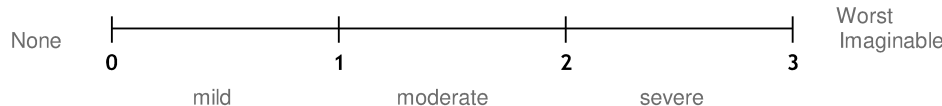

Musculoskeletal components:

a. ARTHRALGIA / ARTHRITIS

b. MYALGIA/MYOSITIS
