OR = 9.3 for adults with Dscores of 2–3 and 4–6 [compared with DS 0–1], respectively. Odds of CS (vs FS) were also higher with higher Dscores (OR = 6.9 and OR = 7.6 for adults with a DS of 2–3 and 4–6 [compared with DS 0–1], respectively).

Conclusion Smoking is highly prevalent in patients with pCCLE. Dscores were positively associated with CS and inversely associated with FS. Smoking cessation is particularly important for adults with pCCLE, and such efforts should target individuals from the most disadvantaged sociodemographic groups.

P58 SYSTEMIC LUPUS ERYTHEMATOUSUS IN NATIVE SUB-SAHARAN AFRICANS: A SYSTEMATIC REVIEW AND META-ANALYSIS

1Mickael Essouma, 1Jan René Nkeck, 2Francky Teddy A Endomba, 3Jean Joel Bigna, 1,5Madeleine Singwe-Ngandeu, 6Eric Hachulla. 1Faculty of Medicine and Biomedical Sciences, University of Yaoundé I, Yaoundé, Cameroon; 2University of Bourgogne, Dijon, France; 3Centre Pasteur of Cameroon, Yaoundé, Cameroon; 4Faculty of Medicine, University of Paris Sud XI, Le Kremlin-Bicêtre, France; 5Yaoundé Central Hospital, Yaoundé, Cameroon; 6Claude Huriez Hospital, Lille University, Lille, France

Background This systematic review of literature and meta-analysis aimed to determine the prevalence, phenotype and treatment of systemic lupus erythematosus (SLE) in Native sub-Saharan Africans.

Methods PubMed, EMBASE, Web of Science, African Journals Online, and Global Index Medicus as well as references of retrieved papers were searched to select studies addressing SLE in Native sub-Saharan Africans and published during January 1, 2008-October 7, 2018. Results were pooled through narrative review and random-effects model. Heterogeneity ($I^2$) was assessed via the $\chi^2$ test. Pooled estimates are expressed with 95% confidence intervals. This study is registered with PROSPERO: registration number CRD42019139226.

Results Fifteen hospital-based studies were included out of 1502 records. The pooled prevalence of SLE was 1.7% (0.8–2.9). The mean age at diagnosis ranged from 28.8 to 39.2 years. The female proportion was 88%–100%. Rheumatological (5.1%–99.9%), dermatological (4.3%–100%) and hematological (1.4–86.9%) manifestations were the commonest. Patients had a high seroprevalence for anti-ribonucleoprotein 57.9% (36.4–77.9), anti-Smith 53.5% (40.4–66.2), anti-Sjogren syndrome antigen A 45.6% (19.2–73.4) and anti-Sjogren syndrome antigen B 33.7% (13.6–57.6) autoantibodies. The most used treatments were corticosteroids 99% (94.9–100) and anti-malarials 62.8% (23.3–94.1). The pooled mortality rate was 10.3% (3.3–20.6); mainly due to infections, kidney and neurological involvement.

Conclusions Over the last 30 years, SLE was not rare among Native sub-Saharan Africans and its featured characteristics were earlier onset, female predominance, and high seropositivity for extractable nuclear antigen autoantibodies. The standard treatments were corticosteroids and anti-malarials. The mortality rate was high. Population prevalence and incidence as well as full description of SLE characteristics in Native sub-Saharan Africans are needed.

P59 PREDICTORS OF RENAL SURVIVAL IN A COHORT OF PATIENTS WITH LUPUS NEPHRITIS WITH MORE THAN 30 YEARS OF FOLLOW-UP

1Filipa Farinha, 2Ruth J Pepper, 3Daniel G Oliveira, 1Thomas McDonnell, 1David A Isenberg, 1Anisur Rahman. 1Centre for Rheumatology, University College London, London; 2Centre for Nephrology, University College London-Royal Free Campus, London, UK; 3Centre for Rheumatology, University College London-Royal Free Campus, London, UK; 4Centre for Rheumatology, University College London-Royal Free Campus, London, UK; 5Internal Medicine Dept., Centro Hospitalar e Universitário do Porto, Porto, Portugal

Background Despite the improvement in survival of patients with lupus nephritis (LN) over the last decades, LN is associated with progression to end-stage renal disease (ESRD) in a significant proportion of patients. We aimed to investigate the factors influencing renal survival in patients with LN.

Abstract P59 Figure 1 Kaplan-meier curves showing cumulative renal survival for patients with LN
